

**Supplementary Fig. 5.** Survival plot showing five years disease-free survival of patients with reference to the expression pattern of the genes in different sub-cellular location. (A) HIF1 $\alpha$  nuclear expression. (B and C) VHL nuclear and cytoplasmic expression, (D and E) LIMD1 nuclear and cytoplasmic expression, (F) VEGF cytoplasmic expression. Blue line, low expression; green line, high/medium expression pattern; ( $P^* < 0.001$ ).
