

Supplementary Fig. 2. Bar plot depicting *Candida* species (y-axis) and the corresponding number of published reports from India (x-axis). As can be seen that across the publications from 1972-2022, *C. albicans* was the most reported species (n=184), followed by *C. tropicalis* (n=164) and *C. glabrata* (n=141).
