

Supplementary Table IV. Multivariate logistic regression: variables associated with hospital readmission for severe COVID-19 survivors

Variable	Odds ratio	95% confidence interval	<i>P</i>
High creatinine on admission to the ICU (>1.2 mg/dl)	2.209	1.868–2.55	0.02
Age	1.023	1.012–1.034	0.039
Length of ICU stay	1.01	1.005–1.015	0.045
