

Supplementary Fig. 3 (A) Mean \pm SD values of S100A4 immunohistochemical scores and relative expression levels of miR-124-3p and miR-133a-3p in control (IMA) and atherosclerotic (aorta) group; (B) Pearson Correlation analysis results between S100A4 immunopositivity scores and miR-124-3p and miR-133a-3p miRNA expression values. The graph shown on the left is S100A4 Score and miR-124-3p $\rightarrow r = -0.84, P^{***} < 0.001$ and on the right is S100A4 Score and miR-133a-3p $\rightarrow r = -0.77, P^{***} < 0.001$ graphs are shown.
